

Heye Newsletter II, June 2014

INTRODUCTION

The football world cup has just started. We look forward for a hot and exciting time – of course with a responsible consumption of cool drinks in glass bottles. Apart from this event, we are already preparing the Glasstec show in Duesseldorf. Be curious – we are going to present a bunch of interesting innovations!

Yours,
Dirk Pörtner

HISPEED PROJECT IN THAILAND DELIVERED

Less than two years ago, our colleagues have met the people from L. Lighting Glass at Glasstec 2012 to discuss a project. Often, it takes ages before it really starts-off. Not this time. Already in January, two 12 section triple-gob IS-machines went under production for an amber furnace. In may, another 12 section triple-gob machine was added in flint, all in NNPB of course.

Remarkable to point out: We did not have any container glass experience, saying Khun Yanattha and Khun Lerdchai from Lighting Glass. So what was the reason for the success? It was the decision of Lighting Glass to book the full training and assistance package from Heye. From top-management to warehouse-staff, everybody was trained by the Heye Glass People. Most important: The team-spirit in the common project groups. We express our thanks to Lighting Glass for this exceptional co-operation.

Message in a Bottle - ARE YOU A FRIEND OF GLASS? The answer to this question will be probably yes. But do you know the latest information from [FEVE's](#) friends of glass campaign? Watch the [new video](#) to discover and find out more about European customer's top three daily worries.

Of course you remember [five clear reasons](#) to choose glass?

See also the [animated cartoon](#) on recycling. Please share this with all your friends!

DIFFERENT WEIGHTS FROM SAME FEEDER
Heye Assortment Production sets market standard
Sampling and the production of short job runs have always been an issue for the plant performance. Downtimes are costly and the production efficiency suffers.

The Heye solution has now been sold several dozen times. No gob is wasted, setting the Heye solution apart from others. A combination with the NNPB-process is also possible. The [Heye Servo Plunger](#) and the [Dual Motor Shears](#) are a prerequisite. Both units can easily be adapted to many IS-Machine types. The [Heye Simotion Servo Control](#) serves as a reliable platform. [See movie](#)

MAXIMIZE PLANT PERFORMANCE – REDUCE DOWNTIMES

Modernization with Heye upgrade kits

State-of-the-art glass plants must constantly fulfill higher requirements. An easy way to keep pace with the rising efficiency pressure is to modernize the equipment. Often, mechanical parts are still in a good condition, whereas the electronics are out-of-date. Long downtimes are the consequence, as spare parts are no longer available.

The solution: [Heye Simotion Servodrive](#). The package comes with servo motor, servo inverter, cables and control panel, depending on the specific mechanism. The solution can be adapted e.g. to the [Heye Servo Plunger](#), the [Dual Motor Shears](#), the [Gob Distributor](#), [Ware Transfer](#) or [Lehr Loader](#). Do not waste time! Benefit from a flexible, reliable solution to maximize your plant productivity!
